

Step 1 — Open Databricks

Open your Databricks workspace.

https://www.databricks.com/?utm_source=chatgpt.com

Step 2 - Go back to “Add data” screen.

Look for an option like:

Workspace → SQL / Catalog

Create or modify table → Upload file(dataset)

Step 3 -Powerbi.

Click Get data to get started at the bottom.

In the connector search box, type Databricks.

Select Databricks / Azure Databricks.

Click Connect.

1. Navigated to SQL → SQL Warehouses and selected the team's SQL Warehouse.

Opened **Connection Details** to obtain the required connection information:

- Server Hostname
- HTTP Path

Copy them exactly into Power BI.

Step 4 - load data

Selected the required database/schema and dataset.
